Attic bypasses are sealed in such a manner that the movement of air is "Essentially Stopped" means that air leakage will not be detected by an infrared scan when the house or dwelling unit is depressurized at 25 Pascals. Materials used for bypasses are determined by the size and location of the bypass. Attic bypasses are sealed in such a manner that the movement of air is "Essentially Stopped" means that air leakage will not be detected by an infrared scan when the house or dwelling unit is depressurized at 25 Pascals. Materials used for bypasses are determined by the size and location of the bypass.
